

The TRENDS team

The TRENDS team is composed of various researchers and industrial partners that focus on a common goal : the achievement of an intelligent software enabling the designers to gather informations on the current trends in the product design field.

The elaboration of this software relies on several technical domains such as engineering design, information retrieval, knowledge acquisition and modelisation, human-machine interface, etc. To achieve this ambitious goal, the TRENDS project has put together several experts in different research and industrial entities. Here under is the map of the european TRENDS consortium and their specialities :
